Thomco Achieves SGS Certification and Certification by Lowes as Private Label Printer

Thomco, a custom converter and specialty industrial distributor, is pleased to announce they have been certified by SGS & Co. and received the “Printer Certification for Flexographic – Process Color and Spot Color.”

With this certification, Thomco joins an elite group of companies in a trusted, global printer network. The rigorous process required the production team to demonstrate their ability to produce packaging to industry specifications, with the goal of achieving visual consistency for branded packaging. In addition to this, Thomco has also been approved by Lowe’s as a flexographic private label printer.

Jim Thompson, President and Founder of Thomco, said, “We couldn’t be prouder of achieving our SGS Certification. This accreditation is an industry standard, indicating flexographic label excellence, and putting us alongside some of the best printers globally. Quality is at the heart of everything we do at Thomco, and these achievements reflect our ongoing commitment to being the best we can be for our clients.”
